Windows 8 machine.

System Required:

- 1)Windows 8 machine.
- 2)Install with two web browser.
- 3)Bandwidth of 30mbps

A lease management project involves creating a system or application to efficiently handle the processes related to leasing real estate properties, equipment, or other assets. The goal is to streamline and automate various tasks associated with lease agreements, ensuring accurate record-keeping, compliance with regulations, and effective communication between parties involved.
